EXAMINER AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. The application has been amended as follows:

IN THE SPECIFICATION:

Page 1, line 3, after 09/491,551 insert U.S Patent number 6,678,406.

Reasons for Allowance

3. The following is statement of reasons for allowance of claims 1-4: The present invention is an image processing method in which pairwise color averages of at least some pairs of pixels is computed and the color averages are stored. Independent claim 1 identifies the uniquely distinct features "selecting luminance value from discrete set of quantized luminance values; selecting a chrominance value from an ordered discrete set of quantized chrominance values and composing a representation of the color average from an index of the selected luminance value and an index of an ordinal position of the selected chrominance value". The closest prior art to Richards (US 5,270,812) discloses computing pairwise color averages of pairs of pixels and storing the color averages, the averaging comprises: converting the luminance index and chrominance index of each pixel to coordinates of a point in a three dimensional

color space, and obtaining the mean of the resulting two points in the color space but fail to anticipate or render the limitation obvious.

4. The following is statement of reasons for allowance of claims 5-9: The present invention is an image processing method in which pairwise color averages of at least some pairs of pixels is computed and the color averages are stored. Independent claim 5 identifies the uniquely distinct features "each chrominance index designates an ordinal position in a spiral lattice of discrete lattice points in a color space and for each pairs of pixels to be average, the averaging is carried out, in part, by computing the mean of the chrominance indices of two selected lattice points". The closest prior art to Richards (US 5,270,812) discloses computing pairwise color averages of pairs of pixels and storing the color averages but fail to anticipate or render the limitation obvious.
